(54) ORGANIC ELECTROLUMINESCENT ELEMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an organic electroluminescent element with long luminescent life and excellent durability.

SOLUTION: An organic electroluminescent element is formed by interposing at least one layer containing at least one kind of compound represented by the formula between a pair of electrodes. In the formula, X₁ represents a substituted or non-substituted N-carbazol group, a substituted or non-substituted N-phenoxazyl group, or a substituted or non-substituted N-phenothiazyl group. X₂ represents a substituted or non-substituted N-carbazol group, a substituted or non-substituted N-phenoxazyl group, a substituted or non-substituted N-phenothiazyl group, or -NAr₁Ar₂(Ar₁ and Ar₂ represent a substituted or non-substituted aryl group), and (m) is 0 or 1.
